

IMPORTANT REMINDER

June 3, 2019

65 SD MPEG-2 SD SIGNALS & 44 RADIO SIGNALS WILL DROP FROM THE SATELLITE

As outlined in Step 7 of Phase 3 of the Transition Plan to MPEG-4; on July 23, 2019 we will drop sixty-five (65) MPEG-2 standard definition signals from F1R & F2 that are currently duplicated in MPEG-4 high definition. If you are not already accessing these signals in HD we recommend that you authorize them prior to July 23, 2019. Please note that some of the MPEG-2 SD signals dropping are specialty signals which means programmers will want you to get consent prior to us authorizing the signal in MPEG-4 HD.

On July 23, 2019 we will also be dropping forty-four (44) radio signals from F1R that are duplicated on F2 T22.

As we get closer to July 23 call volumes and authorization of signal requests will increase so please be proactive and get these signals authorized as soon as possible. To assist with a smoother transition, we recommend you complete the "Transition Signal and Decoder Confirmation Form" and/or the "QT+ Change Form" that was sent to you by your account representative.

A copy of the MPEG-4 Phase 3 Transition Plan, including technical details and MPEG-4 equipment information is available on our website at www.shawbroadcast.com
